Internship

Clinical Research & Data Management (3–6 months)

Location: Epalinges (VD), Switzerland
Start date: As soon as possible
Duration: 3–6 months

About Abionic

Abionic is a Swiss diagnostics company developing rapid point-of-care tests for the early detection of life-threatening conditions such as sepsis, **leveraging** its proprietary nanofluidic technology.

Your Role

You will support the management and analysis of clinical study data.

- Extract and structure clinical study data
- Clean and validate datasets to ensure quality and consistency
- Prepare datasets for statistical analysis
- Contribute to exploratory analysis and the presentation of preliminary findings

Your Profile

- Currently pursuing or recently completed a degree in **Biology, Life Sciences, Biomedical Sciences, or a related field**.
- Strong interest in clinical research, medical data, and data analysis.
- Analytical mindset, attention to detail, and ability to work independently
- Proficiency in Excel.
- Good command of English and French

Previous experience in clinical research or data management is appreciated but not required.

What We Offer

- Hands-on experience in an innovative Swiss MedTech company.
- Practical training in clinical data management, data quality assessment, and medical data interpretation.
- Exposure to real-world clinical datasets and research methodologies.
- The opportunity to contribute to ongoing research activities involving Pancreatic Stone Protein (PSP), a biomarker studied in the context of sepsis.

Interested in Joining Us?

If you are curious, detail-oriented, and eager to gain practical experience at the intersection of clinical research and data analysis, we would love to hear from you!
